Information Security Department

SAN MANUEL
BAND OF MISSION INDIANS

About Our Department

The Information Security Department (IS) at San Manuel is rapidly expanding our ability to identify cyber threats and protect the Casino and Tribal community from cyber-related incidents. Technology plays a key role in all things San Manuel, especially as we continue to see an increasing demand for modernization at every level. The IS team enables the enterprise to adapt quickly and develop modern business practices that increasingly rely on our fully engaged team to securely conduct operations.

Information Technology is a growing industry within San Manuel, offering career advancement through several avenues to meet enterprise goals and demands. We rely on our diverse talents to identify the need for new technologies and rapidly implement, modify and tune security practices to protect the Casino and Tribal community.

What You Will Do

You'll help develop policies, baselines, standards, guidelines, processes and procedures to protect and secure sensitive data. You'll help identify potential security risks to San Manuel-related information and systems, and educate the community about potential security risks through awareness, training and communication. You'll work alongside our team of "technical sleuths" to develop potential security risk scenarios and present narratives to stakeholders that are easy to understand. You'll develop an understanding of potential threats and help the Tribe in reducing risk and raising the bar on information security.

What You'll Learn

An internship with Information Security (IS) will serve as a behind-the-scenes look at daily operations. During the internship program, participants will learn:

There is No 'I' in Team

To work collaboratively with the entire IS team and create education materials on cybersecurity and phishing; configure and monitor data loss prevention and management tools; the importance of endpoint protection and analysis; how to respond to a cyber security incident.

Let's Talk

Why clear and consistent communication is necessary when responding to incidents across the enterprise, and why it's important to help those not savvy with technology become more accustomed to new practices in San Manuel's day-to-day operations.

Become a Technical Sleuth

How to become career IS Team member after your internship is completed. There are several certification programs available through local and nationwide colleges and universities, including our partners at Crafton Hills College.
